

## Simplify sharing of opportunities (Or any other entity) with direct e-mailing links

One thing I found useful when working with Microsoft CRM is the possibility to directly access records by hitting its direct URL. Out-of-the-box this can be manually done by opening a record and hit CTRL-N or CTRL -D. Later copy the URL and paste it to your e-mail.

Add the script to your onLoad you will have a new ready to email link in your right corner of the record.

Notice new link in right corner of entity! Click the E-mail opportunity link to open outlook with direct URL pasted to e-mail

Add the following code to your OnLoad event on the Opportunity screen:

```
function createSendLink()
```

```
{
```

```

var strUrl = "";

if (IsOnline())

{

var title = "Please follow-up on Opportunity [" + crmForm.name.DataValue +
]";

var id = crmForm.ObjectId;

id = id.replace("{", ""); id = id.replace("}", "");

query = '' + this.location;

query = query.substring(0, query.indexOf('?'));

strUrl = query + "/sfa/opps/edit.aspx?id=";

}

if (IsOutlookLaptopClient())

strUrl = crmRcUtil.ServerUrl.replace("MSCRMServices", "") +
"sfa/opps/edit.aspx?id=";

strUrl = escape(strUrl);

var a = document.createElement("a")

var aText = document.createTextNode("E-mail opportunity link...")

a.href = "mailto:&subject="+title+"&body=" + strUrl + id;

a.name = "EmailLink";

a.appendChild(aText)

if (document.getElementById('_MBcrmFormSubmitCrmForm1truefalse') !=
null)

{

var cur = document.getElementById('_MBcrmFormSubmitCrmForm1truefalse')

document.getElementById('mnuTitle').insertBefore(a, cur.nextSibling);

}

}

```
